Document Element: Policy HC10: Design Requirements

Respondent: Mr Tony Hinkley

Date received: 30/11/2022 via Web

Summary:

Sustainable design: I may have missed this but as well as car charging points there is likely to be a need for 3 phase electricity supplies to houses to manage future load demands of electric cars. Also it is imperative that houses are built with solar panels or heat pumps (air or ground source). Its cheaper to build for the future rather than retrofit.
